

AHMED MOHAMED

IT Operations & Automation Engineer

ahmeedmustafaaa@gmail.com linkedin.com/in/ahmed-mohamed-9411311a8 AhmedMustafa-tech.github.io/portfolio

Giza, Egypt

SUMMARY

IT operations engineer with 6+ years in IT support and operations, currently supporting two regional service desks at a Gulf fintech. I build production automation on Jira Service Management, n8n, Slack and OpenAI GPT, including an AI SLA assistant, same-day offboarding and live leadership reporting. Skilled in identity and access management (JumpCloud, Google Workspace, Active Directory), endpoint administration, incident response and root cause analysis. CCNA and MCSA certified.

EXPERIENCE

IT Helpdesk Engineer (IT Operations & Automation)

06/2025 – Present · Cairo, Egypt

Gulf fintech company · two regional service desks

- Resolve incidents and service requests across two regional Jira Service Management queues: access, devices and business applications.
- Designed, built and own **Atlas**, an AI-powered Slack SLA assistant (n8n, OpenAI GPT, Jira REST API) that flags at-risk tickets before they breach, escalates stalled ones and answers queue questions with approved procedures.
- Built end-to-end **offboarding automation** across 5 systems (JumpCloud, Google Workspace, Jira, Slack, MDM): **14 manual steps** → **0**, with same-day access removal and an audit trail on every run.
- Built and maintain a live **executive IT dashboard** (React, n8n, Jira REST API): reporting went from **1× a month to 24× a day**, covering 2 regions.
- Fixed a dashboard out-of-memory failure by refactoring the n8n pipeline into per-batch sub-workflows, so every data run completes with identical output.
- Planned and led a company-wide **device MFA rollout** across 3 entities on macOS and Windows, with phased waves, a tested recovery path and **zero permanent lockouts**.
- Coordinated a P0 **email blocklisting incident**: domain-wide sender audit in BigQuery, move of bulk mail to authenticated subdomains (SPF, DKIM, DMARC), and the RCA.
- Led the browser mitigation for a CRM outage affecting support agents (Chrome rollback via JumpCloud and PowerShell) and authored the RCA.
- Launched automated leadership reports, including a daily security-approval SLA report, an hourly IT backlog tracker and meeting-room AV health monitoring.
- Administer JumpCloud across 2 organizations and Google Workspace; manage Egypt onboarding and device lifecycle with Snipe-IT asset tracking.

Service Desk Admin

10/2022 – 04/2025 · Cairo, Egypt

Online food-delivery platform · MENA

- Installed, configured and maintained workstations, software and peripherals (routers, printers, network nodes).
- Troubleshoot hardware, software and network issues, restoring users to work quickly.
- Managed user accounts and permissions in Active Directory (creation, disabling, group membership, access control).
- Trained new employees on company systems and planned upgrades and maintenance with minimal downtime.

IT Field Support Specialist

01/2020 – 10/2022 · Giza, Egypt

IT services provider

- Provided on-site and remote support for PCs, printers, scanners, attendance systems and CCTV/IP cameras.
- Maintained LAN/WAN connectivity with ISPs to keep client networks available 24/7.
- Performed preventive maintenance, backups and updates, and documented configurations and incidents.

STRENGTHS

IT Automation & AI: n8n workflows, REST API integrations and AI assistants that remove manual work from service desks.

Identity & Access: provisioning, SSO, MFA and device policies with automated, audited access removal.

Incident Response & RCA: mitigation across endpoints and SaaS, vendor coordination and clear root cause analyses.

Reporting: live dashboards and automated reports that give leadership real-time visibility of SLAs and backlog.
